PROFINET

Description

The drives offer Profinet IRT communication and control via Siemens Tia Portal development environment. It allows updating the set points with a cycle time of less than 1 ms. STDL-PN drives offer improved speed-torque characteristics that make this stepper system versatile and usable in many applications.
Other advantages:
- Profinet IRT communication
- Automatic Brake control
- Easy and fast mounting on the DIN rail
- Closed-loop system (errors are corrected)
- Free programming software

For configuration of the STDL drive STIL device is needed.
STIL device connects to STIL port on STDL drive.
